写在前面

各位亲爱的同学，六级考试词汇量要求是 5500 左右，但是即使你把所有的大纲词汇都记住了，你还是会遇到生词，这很正常。我在之前学习英语的时候，每每遇到生词就会记中文意思在旁边，积累的单词多了可以用英文来记新单词的含义。久而久之遇到的次数多了单词就记住了。我在课堂上会在讲到阅读的方法，但是这些方法都是基于单词的基础的。所以请大家一定要重视单词，勤动手记笔记。笔记不用单独准备笔记本，记在讲义上就行。

如果你词汇量低，可以先刷一刷词汇课 30 讲。再来听课会轻松得多。

阅读部分在英语四级考试中分为三个题型

SectionA 选词填空-这个题 10 个题只占 5%的分数，我们最后来冲刺 5 篇。

SectionB 长篇阅读-段落匹配 10 道题 10%的分数，学会方法较为简单，在课程上会讲系统的做题方法。由于页数较多不建议全部打印，讲义中仅展示一篇。大家需要刷题可以按照自己的需求打印。

SectionC 仔细阅读 10 道题 占 20%的分数，我们的课程是这个部分为主。

做题顺序：先做 sectionC，再做翻译，再做 sectionB，最后 SectionA

Passage One

Questions 46 to 50 are based on the following passage.

One of the great successes of the Republican Party in recent decades is the relentless propagation of a simple formula for economic growth:tax cuts.

The formula doesn't work,but that has not affected its popularity.And while the cult of tax cuts has attracted many critics,it lacks for obvious rivals.

Democratic politicians have tended to campaign on helping people left behind by economic growth.When Democrats do talk about encouraging economic growth,they often sound like Republicans.

This is not just a political problem for Democrats;it is an economic problem for the United States.The nation needs a better story about the drivers of economic growth.The painful lessons of recent decades point to a promising candidate:higher wages.

Raising the wages of American workers ought to be the priority of economic policymakers.We'd all be better off paying less attention to quarterly updates on the growth of the nation's gross domestic product (GDP) and focusing instead on the growth of workers' paychecks.

Set aside,for the moment,the familiar argument for higher wages:fairness.The argument here is that higher wages can fuel the engine of economic growth.

Perhaps the most famous illustration of the benefits is the story of Henry Ford's decision in 1914 to pay \$5 a day to workers on his Model T assembly lines.He did it to increase production-he was paying a premium to maintain a reliable workforce.The unexpected benefit was that Ford's factory workers became Ford customers,too.

The same logic still holds:Consumption drives the American economy,and workers who are paid more can spend more

Mainstream economists insist that it is impossible to order up a sustainable increase in wages because compensation levels reflect the unerring judgment of market forces.

The conventional wisdom held that productivity growth was the only route to higher wages.Through that lens,efforts to negotiate higher wages were counterproductive.Minimum-wage laws would raise unemployment because there was only so much money in the wage pool,and if some people got more,others would get none.

It was in the context of this worldview that it became popular to argue that tax cuts would drive prosperity. Rich people would invest,productivity would increase,wages would rise.

In the real world,things are more complicated.Wages are influenced by a tug of war between employers and workers,and employers have been winning.One clear piece of evidence is the widening gap between productivity growth and wage growth since roughly 1970.Productivity has more than doubled;wages have lagged far behind.

A focus on wage growth would provide an antidote(矫正方法)to the attractive simplicity of the belief in the magical power of tax cuts.

46. Why does the formula of tax cuts remain popular though ineffective?

- A) Its critics' voice has not been heard throughout the country.
- B) There seem to be no other options available to replace it.
- C) The cult of tax cuts has been relentlessly propagated by all policymakers.
- D) There appears to be a misunderstanding of the formula among the public.

47. What does the author think is a more effective measure for driving economic growth in the U.S.?

- A) Aiding people left behind by economic growth.
- B) Prioritizing the growth of the nation's GDP.
- C) Increasing the compensation for labor.
- D) Introducing even more extensive tax cuts.

48. What is the logic underlying the author's viewpoint?

- A) The growth of workers' paychecks ultimately boosts the nation's economy.
- B) Paying a premium to maintain a reliable workforce attracts more customers.
- C) Consumption stimulates the desire for higher wages.
- D) Familiar arguments for higher wages are outdated.

49. What is the basis for higher wages according to the conventional wisdom?

- A) Fairness in distribution.
- B) Increase in productivity.
- C) The priority of economic policymakers.
- D) The unerring judgment of market forces.

50. What do we learn about things in the real world in America for the past 50 years or so?

- A) People have failed to see a corresponding increase in wages and in productivity.
- B) People have been disheartened by the widening gap between the haves and have-nots.
- C) People have witnessed a tug of war between Republicans and Democrats over tax cuts.
- D) People have seen the link disappearing between productivity and workers' well-being.

Text 2 Questions 51 to 55 are based on the following passage.

Journal editors decide what gets published and what doesn't, affecting the careers of other academics and influencing the direction that a field takes. You'd hope, then, that journals would do everything they can to establish a diverse editorial board, reflecting a variety of voices, experiences, and identities.

Unfortunately a new study in *Nature Neuroscience* makes for disheartening reading. The team finds that the majority of editors in top psychology and neuroscience journals are male and based in the United States: a situation that may be amplifying existing gender inequalities in the field and influencing the kind of research that gets published.

Men were found to account for 60% of the editors of psychology journals. There were significantly more male than female editors at each level of seniority, and men made up the majority of editors in over three quarters of the journals. Crucially, the proportion of female editors was significantly lower than the overall proportion of women psychology researchers.

The differences were even starker in the neuroscience journals: 70% of editors were male, and men held the majority of editorial positions in 88% of journals. In this case, the proportion of female editors was not significantly lower than the proportion of female researchers working in neuroscience—a finding that reveals enduring gender disparities in the field more broadly.

Based on their results, the team concludes that "the ideas, values and decision-making biases of men are overrepresented in the editorial positions of the most recognized academic journals in psychology and

neuroscience."

Gender inequality in science is often attributed to the fact that senior academics are more likely to be male, because historically science was male-dominated: it's argued that as time goes on and more women rise to senior roles, the field will become more equal. Yet this study showed that even the junior roles in psychology journals tended to be held disproportionately by men, despite the fact that there are actually more female than male junior psychology faculty.

This implies that a lack of female academics is not the problem. Instead, there are structural reasons that women are disadvantaged in science. Women receive lower salaries and face greater childcare demands, for instance, which can result in fewer publications and grants—the kinds of things that journals look for when deciding who to appoint. Rather than simply blaming the inequality of editorial boards on tradition, we should be actively breaking down these existing barriers.

A lack of diversity among journal editors also likely contributes to psychology's WEIRD problem. If journal editors are largely men from the United States, then they will probably place higher value on papers that are relevant to Western, male populations, whether consciously or not.

51.What would we expect an editorial board of an academic journal to exhibit in view of its important responsibilities?

- A)Insight. C)Integrity.
- B)Expertise. D)Diversity.

52.What do we learn from the findings of a new study in Nature Neuroscience?

- A)The majority of top psychology and neuroscience journals reflect a variety of voices,experiences and identities.
- B)The editorial boards of most psychology and neuroscience journals do influence the direction their field takes.
- C)The editorial boards of the most important journals in psychology and neuroscience are male-dominated.
- D)The majority of editors in top psychology and neuroscience journals have relevant backgrounds.

53.What fact does the author highlight concerning the gender differences in editors of psychology journals?

- A)There were quite a few female editors who also distinguished themselves as influential psychology researchers.
- B)The number of female editors was simply disproportionate to that of women engaged in psychology research.
- C)The proportion of female editors was increasingly lower at senior levels.
- D)There were few female editors who could move up to senior positions.

54.What can we infer from the conclusion drawn by the team of the new study on the basis of their findings?

- A)Women's views are underrepresented in the editorial boards of top psychology and neuroscience journals.
- B)Male editors of top psychology and neuroscience journals tend to be biased against their female colleagues.
- C)Male researchers have enough representation in the editorial boards to ensure their publications.
- D)Female editors have to struggle to get women's research articles published in academic journals.

55.What does the author suggest we do instead of simply blaming the inequality of editorial boards on tradition?

- A)Strike a balance between male and female editors. C)Enlarge the body of female academics.
- B)Increase women's employment in senior positions. D)Implement overall structural reforms.

TEXT3

Organic agriculture is a relatively untapped resource for feeding the Earth's population, especially in the face of climate change and other global challenges. That's the conclusion I reached in reviewing 40 years of science comparing the long-term prospects of organic and conventional farming.

The review study, “Organic Agriculture in the 21st Century,” is featured as the cover story for the February issue of the journal *Nature Plants*. It is the first to compare organic and conventional agriculture across the main goals of sustainability identified by the National Academy of Sciences: productivity, economics, and environment.

Critics have long argued that organic agriculture is inefficient, requiring more land to yield the same amount of food. It's true that organic farming produces lower yields, averaging 10 to 20 percent less than conventional. Advocates contend that the environmental advantages of organic agriculture far outweigh the lower yields, and that increasing research and breeding resources for organic systems would reduce the yield gap. Sometimes excluded from these arguments is the fact that we already produce enough food to more than feed the world's 7.4 billion people but do not provide adequate access to all individuals.

In some cases, organic yields can be higher than conventional. For example, in severe drought conditions, which are expected to increase with climate change in many areas, organic farms can produce as good, if not better, yields because of the higher water-holding capacity of organically farmed soils.

What science does tell us is that mainstream conventional farming systems have provided growing supplies of food and other products but often at the expense of other sustainability goals.

Conventional agriculture may produce more food, but it often comes at a cost to the environment. Biodiversity loss, environmental degradation, and severe impacts on ecosystem services have not only accompanied conventional farming systems but have often extended well beyond their field boundaries. With organic agriculture, environmental costs tend to be lower and the benefits greater.

Overall, organic farms tend to store more soil carbon, have better soil quality, and reduce soil erosion compared to their conventional counterparts. Organic agriculture also creates less soil and water pollution and lower greenhouse gas emissions. And it's more energy-efficient because it doesn't rely on synthetic fertilizers or pesticides.

Organic agriculture is also associated with greater biodiversity of plants, animals, insects and microorganisms as well as genetic diversity. Biodiversity increases the services that nature provides and improves the ability of farming systems to adapt to changing conditions.

Despite lower yields, organic agriculture is more profitable for farmers because consumers are willing to pay more. Higher prices, called price premiums, can be justified as a way to compensate farmers for providing ecosystem services and avoiding environmental damage or external costs.

51. What do we learn from the conclusion of the author's review study?

- A) More resources should be tapped for feeding the world's population.
- B) Organic farming may be exploited to solve the global food problem.
- C) The long-term prospects of organic farming are yet to be explored.
- D) Organic farming is at least as promising as conventional farming.

52. What is the critics' argument against organic farming?

- A) It cannot meet the need for food.
- B) It cannot increase farm yields.
- C) It is not really practical.
- D) It is not that productive.

53. What does the author think should be taken into account in arguing about organic farming?

- A) Growth in world population.
- B) Deterioration in soil fertility.
- C) Inequality in food distribution.
- D) Advance in farming technology.

54. What does science tell us about conventional farming?

- A) It will not be able to meet global food demand.
- B) It is not conducive to sustainable development.
- C) It will eventually give away to organic farming.
- D) It is going mainstream throughout the world.

55. Why does the author think higher prices of organic farm produce are justifiable?

- A) They give farmers going organic a big competitive edge.
- B) They motivate farmers to upgrade farming technology.
- C) Organic farming costs more than conventional farming.
- D) Organic farming does long-term good to the ecosystem.

TEXT4

What is the place of art in a culture of inattention? Recent visitors to the Louvre report that tourists can now spend only a minute in front of the Mona Lisa before being asked to move on. Much of that time, for some of them, is spent taking photographs not even of the painting but of themselves with the painting in the background.

One view is that we have democratised tourism and gallery-going so much that we have made it effectively impossible to appreciate what we've travelled to see. In this oversubscribed society, experience becomes a commodity like any other. There are queues to climb Mt. Jolmo Lungma as well as to see famous paintings. Leisure, thus conceived, is hard labour, and returning to work becomes a well-earned break from the ordeal.

What gets lost in this industrialised haste is the quality of looking. Consider an extreme example, the late philosopher Richard Wollheim. When he visited the Louvre he could spend as much as four hours sitting before a painting. The first hour, he claimed, was necessary for misperceptions to be eliminated. It was only then that the picture would begin to disclose itself. This seems unthinkable today, but it is still possible to organise. Even in the busiest museums there are many rooms and many pictures worth hours of contemplation which the crowds largely ignore. Sometimes the largest crowds are partly the products of bad management; the Mona Lisa is such a hurried experience today partly because the museum is being reorganised. The Uffizi in Florence, another site of cultural pilgrimage, has cut its entry queues down to seven minutes by clever management. And there are some forms of art, those designed to be spectacles as well as objects of contemplation, which can work perfectly well in the face of huge crowds.

Olafur Eliasson's current Tate Modern show, for instance, might seem nothing more than an entertainment, overrun as it is with kids romping (喧闹地玩耍) in fog rooms and spray mist installations. But it's more than that: where Eliasson is at his most entertaining, he is at his most serious too, and his disorienting installations bring home the reality of the destructive effects we are having on the planet — not least what we are doing to the glaciers of Eliasson's beloved Iceland.

Marcel Proust, another lover of the Louvre, wrote: “It is only through art that we can escape from ourselves and know how another person sees the universe, whose landscapes would otherwise have remained as unknown as any on the moon.” If any art remains worth seeing, it must lead us to such escapes. But a minute in front of a painting in a hurried crowd won't do that.

46. What does the scene at the Louvre demonstrate according to the author?

- A) The enormous appeal of a great piece of artistic work to tourists.
- B) The near impossibility of appreciating art in an age of mass tourism.
- C) The ever-growing commercial value of long-cherished artistic works.
- D) The real difficulty in getting a glimpse at a masterpiece amid a crowd.

47. Why did the late philosopher Richard Wollheim spend four hours before a picture?

- A) It takes time to appreciate a piece of art fully.
- B) It is quite common to misinterpret artistic works.
- C) The longer people contemplate a picture, the more likely they will enjoy it.
- D) The more time one spends before a painting, the more valuable one finds it.

48. What does the case of the Uffizi in Florence show?

- A) Art works in museums should be better taken care of.
- B) Sites of cultural pilgrimage are always flooded with visitors.
- C) Good management is key to handling large crowds of visitors.
- D) Large crowds of visitors cause management problems for museums.

49. What do we learn from Olafur Eliasson's current Tate Modern show?

- A) Children learn to appreciate art works most effectively while they are playing.
- B) It is possible to combine entertainment with appreciation of serious art.
- C) Art works about the environment appeal most to young children.
- D) Some forms of art can accommodate huge crowds of visitors.

50. What can art do according to Marcel Proust?

- A) Enable us to live a much fuller life.
- B) Allow us to escape the harsh reality.
- C) Help us to see the world from a different perspective.
- D) Urge us to explore the unknown domain of the universe.

TEXT5

Every five years, the government tries to tell Americans what to put in their bellies. Eat more vegetables. Dial back the fats. It's all based on the best available science for leading a healthy life. But the best available science also has a lot to say about what those food choices do to the environment, and some researchers are annoyed that new dietary recommendations of the USDA (United States Department of Agriculture) released yesterday seem to utterly ignore that fact.

Broadly, the 2016 - 2020 dietary recommendations aim for balance: More vegetables, leaner meats and far less sugar.

But Americans consume more calories per capita than almost any other country in the world. So the things Americans eat have a huge impact on climate change. Soil tilling releases carbon dioxide, and delivery vehicles emit exhaust. The government's dietary guidelines could have done a lot to lower that climate cost. Not just because of their position of authority: The guidelines drive billions of dollars of food production through federal programs like school lunches and nutrition assistance for the needy.

On its own, plant and animal agriculture contributes 9 percent of all the country's greenhouse gas emissions. That's not counting the fuel burned in transportation, processing, refrigeration, and other waypoints between farm and belly. Red meats are among the biggest and most notorious emitters, but trucking a salad from California to Minnesota in January also carries a significant burden. And greenhouse gas emissions aren't the whole story. Food production is the largest user of fresh water, largest contributor to the loss of biodiversity, and a major contributor to using up natural resources.

All of these points and more showed up in the Dietary Guidelines Advisory Committee's scientific report, released last February. Miriam Nelson chaired the subcommittee in charge of sustainability for the report, and is disappointed that eating less meat and buying local food aren't in the final product. "Especially if you consider that eating less meat, especially red and processed, has health benefits," she says.

So what happened? The official response is that sustainability falls too far outside the guidelines' official scope, which is to provide "nutritional and dietary information."

Possibly the agencies in charge of drafting the decisions are too close to the industries they are supposed to regulate. On one hand, the USDA is compiling dietary advice. On the other, their clients are US agriculture companies.

The line about keeping the guidelines' scope to nutrition and diet doesn't ring quite

right with researchers. David Wallinga, for example, says, “ In previous guidelines, they’ve always been concerned with things like food security — which is presumably the mission of the USDA. You absolutely need to be worried about climate impacts and future sustainability if you want secure food in the future.”

51. Why are some researchers irritated at the USDA's 2016—2020 Dietary Guidelines?

- A) It ignores the harmful effect of red meat and processed food on health.
- B) Too much emphasis is given to eating less meat and buying local food.
- C) The dietary recommendations are not based on medical science.
- D) It takes no notice of the potential impact on the environment.

52. Why does the author say the USDA could have contributed a lot to lowering the climate cost through its dietary guidelines?

- A) It has the capacity and the financial resources to do so.
- B) Its researchers have already submitted relevant proposals.
- C) Its agencies in charge of drafting the guidelines have the expertise.
- D) It can raise students’ environmental awareness through its programs.

53. What do we learn from the Dietary Guidelines Advisory Committee’s scientific report?

- A) Food is easily contaminated from farm to belly.
- B) Greenhouse effect is an issue still under debate.
- C) Modern agriculture has increased food diversity.
- D) Farming consumes most of our natural resources.

54. What may account for the neglect of sustainability in the USDA’s Dietary Guidelines according to the author?

- A) Its exclusive concern with Americans’ food safety.
- B) Its sole responsibility for providing dietary advice.
- C) Its close ties with the agriculture companies.
- D) Its alleged failure to regulate the industries.

55. What should the USDA do to achieve food security according to David Wallinga?

- A) Give top priority to things like nutrition and food security.
- B) Endeavor to ensure the sustainable development of agriculture.
- C) Fulfill its mission by closely cooperating with the industries.
- D) Study the long-term impact of climate change on food production.

TEXT6

Vegetarians would prefer not to be compelled to eat meat. Yet the reverse compulsion (强迫) is hidden in the proposals for a new plant-based “planetary diet.” Nowhere is this more visible than in India.

Earlier this year, the EAT-Lancet Commission released its global report on nutrition and called for a global shift to a more plant-based diet and for “substantially reducing consumption of animal source foods.” In countries like India, that call could become a tool to aggravate an already tense political situation and stress already undernourished populations.

The EAT report presumes that “traditional diets” in countries like India include little red meat, which might be consumed only on special occasions or as minor ingredients in mixed dishes.

In India, however, there is a vast difference between what people would wish to consume and what they have to consume because of innumerable barriers around class, religion, culture, cost, geography, etc. Policymakers in India have traditionally pushed for a cereal-heavy “vegetarian diet” on a meat-eating population as a way of providing the cheapest sources of food.

Currently, under an aggressive Hindu nationalist government, Muslims, Christians, disadvantaged classes and indigenous communities are being compelled to give up their traditional foods.

None of these concerns seem to have been appreciated by the EAT-Lancet Commission’s representative, Brent Loken, who said “India has got such a great example” in sourcing protein from plants.

But how much of a model for the world is India’s vegetarianism? In the Global Hunger Index 2019, the country ranks 102nd out of 117. Data from the National Family Health Survey indicate that only 10 percent of infants of 6 to 23 months are adequately fed.

Which is why calls for a plant-based diet modeled on India risk offering another whip with which to beat already vulnerable communities in developing countries.

A diet directed at the affluent West fails to recognize that in low-income countries undernourished children are known to benefit from the consumption of milk and other animal source foods, improving cognitive functions, while reducing the prevalence of nutritional deficiencies as well as mortality.

EAT-Lancet claimed its intention was to “spark conversations” among all Indian stakeholders. Yet vocal critics of the food processing industry and food fortification strategies have been left out of the debate. But the most conspicuous omission may well be the absence of India’s farmers.

The government, however, seems to have given the report a thumbs-up. Rather than addressing chronic hunger and malnutrition through an improved access to wholesome and nutrient-dense foods, the government is opening the door for company-dependent solutions, ignoring the environmental and economic cost, which will destroy local food systems. It’s a model full of danger for future generations.

46. What is more visible in India than anywhere else according to the passage?
 - A) People’s positive views on the proposals for a “planetary diet” .
 - B) People’s reluctance to be compelled to eat plant-based food.
 - C) People’s preferences for the kind of food they consume.
 - D) People’s unwillingness to give up their eating habits.
47. What would the EAT-Lancet Commission’s report do to many people in countries like India?
 - A) Radically change their dietary habits.
 - B) Keep them further away from politics.
 - C) Make them even more undernourished.
 - D) Substantially reduce their food choices.
48. What do we learn from the passage about food consumption in India?
 - A) People’s diet will not change due to the EAT-Lancet report.
 - B) Many people simply do not have access to foods they prefer.
 - C) There is a growing popularity of a cereal-heavy vegetarian diet.
 - D) Policymakers help remove the barriers to people’s choice of food.
49. What does the passage say about a plant-based diet modeled on India?
 - A) It may benefit populations whose traditional diet is meat-based.
 - B) It may be another blow to the economy in developing countries.
 - C) It may help narrow the gap between the rich and poor countries.
 - D) It may worsen the nourishment problem in low-income countries.
50. How does the Indian government respond to the EAT-Lancet Commission’s proposals?
 - A) It accepts them at the expense of the long-term interests of its people.
 - B) It intends them to spark conversations among all Indian stakeholders.
 - C) It gives them approval regardless of opposition from nutrition experts.
 - D) It welcomes them as a tool to address chronic hunger and malnutrition.

TEXT7

Back in 1964, in his book *Games People Play*, psychiatrist Eric Berne described a pattern of conversation he called “Why Don’t You—Yes But”, which remains one of the most irritating aspects

of everyday social life. The person adopting the strategy is usually a chronic complainer. Something is terrible about their relationship, job, or other situation, and they moan about it ceaselessly, but find some excuse to dismiss any solution that’s proposed. The reason, of course, is that on some level they don’t want a solution; they want to be validated in their position that the world is out to get them. If they can “win” the game—dismissing every suggestion until their interlocutor(对话者) gives up in annoyance—they get to feel pleurably righteous (正当的) in their resentments and excused from any obligation to change.

Part of the trouble here is the so-called responsibility/fault fallacy (谬误). When you’re feeling hard done by—taken for granted by your partner, say, or obliged to work for a half-witted boss—it’s easy to become attached to the position that it’s not your job to address the matter, and that doing so would be an admission of fault. But there’s a confusion here. For example, if I were to discover a newborn at my front door, it wouldn’t be my fault, but it most certainly would be my responsibility. There would be choices to make, and no possibility of avoiding them, since trying to ignore the matter would be a choice. The point is that what goes for the baby on the doorstep is true in all cases: even if the other person is 100% in the wrong, there’s nothing to be gained, long-term, from using this as a justification to evade responsibility.

Should you find yourself on the receiving end of this kind of complaining, there’s an ingenious way to shut it down—which is to agree with it, ardently. Psychotherapist Lori Gottlieb describes this as “over-validation”. For one thing, you’ll be spared further moaning, since the other person’s motivation was to confirm her beliefs, and now you’re confirming them. But for another, as Gottlieb notes, people confronted with over-validation often hear their complaints afresh and start arguing back. The notion that they’re utterly powerless suddenly seems unrealistic—not to mention rather annoying—so they’re prompted instead to generate ideas about how they might change things.

“And then, sometimes, something magical might happen,” Gottlieb writes. The other person “might realise she’s not as trapped as you are saying she is, or as she feels.” Which illustrates the irony of the responsibility/fault fallacy: evading responsibility feels comfortable, but turns out to be a prison; whereas assuming responsibility feels unpleasant,

but ends up being freeing.

51. What is characteristic of a chronic complainer, according to psychiatrist Eric Berne?

- A) They only feel angry about their ill treatment and resent whoever tries to help.
- B) They are chronically unhappy and ceaselessly find fault with people around them.
- C) They constantly dismiss others , proposals while taking no responsibility for tackling the problem.
- D) They lack the knowledge and basic skills required for successful conversations with their interlocutors.

52. What does the author try to illustrate with the example of the newborn on one's doorstep?

- A) People tend to think that one should not be held responsible for others' mistakes.
- B) It is easy to become attached to the position of overlooking one's own fault.
- C) People are often at a loss when confronted with a number of choices.
- D) A distinction should be drawn between responsibility and fault.

53. What does the author advise people to do to chronic complainers?

- A) Stop them from going further by agreeing with them.
- B) Listen to their complaints ardently and sympathetically.
- C) Ask them to validate their beliefs with further evidence.
- D) Persuade them to clarify the confusion they have caused.

54. What happens when chronic complainers receive over-validation?

A) They are motivated to find ingenious ways to persuade their interlocutor.

B) They are prompted to come up with ideas for making possible changes.

C) They are stimulated to make more complaints.

D) They are encouraged to start arguing back.

55. How can one stop being a chronic complainer according to the author?

A) Analysing the so-called responsibility/fault fallacy.

B) Avoiding hazardous traps in everyday social life.

C) Assuming responsibility to free oneself.

D) Awaiting something magical to happen.

TEXT8

Why does social media trigger feelings of loneliness and inadequacy? Because instead of being real life, it is, for the most part, impression management, a way of marketing yourself, carefully choosing and filtering the pictures and words to put your best face forward.

Online “friends” made through social media do not follow the normal psychological progression of an interpersonal relationship. You share neither physical time nor emotional conversations over the Internet. You simply communicate photographs and catchy posts to a diverse group of people whom you have “friended” or “followed” based on an accidental interaction. This is not to say that your social media friends can’t be real friends. They absolutely can, but the two are not synonymous.

Generally speaking, there are no unfiltered comments or casually taken photos on our social media pages. And, rightfully so, because it wouldn’t feel safe to be completely authentic and vulnerable with some of our “friends” whom we don’t actually know or with whom trust has yet to be built.

Social media can certainly be an escape from the daily grind, but we must be cautioned against the negative effects, such as addiction, on a person’s overall psychological well-being.

As humans, we yearn for social connection. Scrolling (滚动) through pages of pictures and comments, however, does not provide the same degree of fulfillment as face-to-face interactions do. Also, we tend to idealize others’ lives and compare our downfalls to their greatest accomplishments, ending in feelings of loneliness and inadequacy.

Social media can lead people on the unhealthy quest for perfection. Some people begin to attend certain events or travel to different places so that they can snap that “perfect” photo. They begin to seek validation through the number of people who “like” their posts. In order for it to play a psychologically healthy role in your social life, social media should supplement an already healthy social network. Pictures and posts should be byproducts of life’s treasured moments and fun times, not the planned and calculated image that one is putting out into cyberspace in an attempt to fill insecurities or unmet needs.

Ultimately, social media has increased our ability to connect with various types of people all over the globe. It has opened doors for businesses and allowed us to stay

connected to people whom we may not otherwise get to follow. However, social media should feel like a fun experience, not one that contributes to negative thoughts and feelings. If the latter is the case, increasing face-to-face time with trusted friends, and minimizing time scrolling online, will prove to be a reminder that your social network is much more rewarding than any “ like,” “ follow ” or “ share ” can be.

46. What does the author imply social media may do to our life?

- A) It may facilitate our interpersonal relationships.
- B) It may filter our negative impressions of others.
- C) It may make us feel isolated and incompetent.
- D) It may render us vulnerable and inauthentic.

47. Why do people post comments selectively on social media?

- A) They do not find all their online friends trustworthy.
- B) They want to avoid offending any of their audience.
- C) They do not want to lose their followers.
- D) They are eager to boost their popularity.

48. What are humans inclined to do according to the passage?

- A) Exaggerate their life’ s accomplishments.
- B) Strive for perfection regardless of the cost.
- C) Paint a rosy picture of other people’ s lives.
- D) Learn lessons from other people’ s downfalls.

49. What is the author’ s view of pictures and posts on social media?

- A) They should record the memorable moments in people’ s lives.
- B) They should be carefully edited so as to present the best image.
- C) They should be shown in a way that meets one’ s security needs.
- D) They should keep people from the unhealthy quest for perfection.

50. What does the author advise people to do when they find their online experience unconstructive?

- A) Use social media to increase their ability to connect with various types of people.
- B) Stay connected to those whom they may not otherwise get to know and befriend.
- C) Try to prevent negative thoughts and feelings from getting into the online pages.
- D) Strengthen ties with real-life friends instead of caring about their online image.

TEXT9

Imagine that an alien species landed on Earth and, through their mere presence, those aliens caused our art to vanish, our music to homogenize, and our technological know-how to disappear. That is effectively what humans have been doing to our closest relatives — chimps (大猩猩).

Back in 1999, a team of scientists led by Andrew Whiten showed that chimps from different parts of Africa behave very differently from one another. Some groups would get each other's attention by rapping branches with their knuckles (指关节), while others did it by loudly ripping leaves with their teeth. The team identified 39 of these traditions that are practiced by some communities but not others — a pattern that, at the time, hadn't been seen in any animal except humans. It was evidence, the team said, that chimps have their own cultures.

It took a long time to convince skeptics that such cultures exist, but now we have plenty of examples of animals learning local traditions from one another.

But just when many scientists have come to accept the existence of animal cultures, many of those cultures might vanish. Ammie Kalan and her colleagues have shown, through years of intensive fieldwork, that the very presence of humans has eroded the diversity of chimp behavior. Where we flourish, their cultures wither. It is a bitterly ironic thing to learn on the 20th anniversary of Whiten's classic study.

“ It's amazing to think that just 60 years ago, we knew next to nothing of the behavior of our sister species in the wild,” Whiten says. “ But now, just as we are truly getting to know our primate(灵长类)cousins, the actions of humans are closing the window on all we have discovered.”

“ Sometimes in the rush to conserve the species, I think we forget about the individuals,” says Cat Hobaiter, a professor at the University of St. Andrews. “ Each population, each community, even each generation of chimps is unique. An event might only have a small impact on the total population of chimps, but it may wipe out an entire community — an entire culture. No matter what we do to restore habitat or support population growth, we may never be able to restore that culture.”

No one knows whether the destruction of chimp culture is getting worse. Few places have tracked chimp behavior over long periods, and those that have are also more likely to

have protected their animals from human influence.

Obviously, conservationists need to think about saving species in a completely new way —by preserving animal traditions as well as bodies and genes. “ Instead of focusing only on the conservation of genetically based entities like species, we now need to also consider culturally based entities,” says Andrew Whiten.

51. What does the author say we humans have been doing to chimps?

- A) Ruining their culture.
- B) Accelerating their extinction.
- C) Treating them as alien species.
- D) Homogenizing their living habits.

52. What is the finding of Andrew Whiten's team?

- A) Chimps demonstrate highly developed skills of communication.
- B) Chimps rely heavily upon their body language to communicate.
- C) Chimps behave in ways quite similar to those of human beings.
- D) Different chimp groups differ in their way of communication.

53. What did Ammie Kalan and her colleagues find through their intensive fieldwork?

- A) Whiten's classic study has little impact on the diversity of chimp behavior.
- B) Chimp behavior becomes less varied with the increase of human activity.
- C) Chimps alter their culture to quickly adapt to the changed environment.
- D) It might already be too late to prevent animal cultures from extinction.

54. What does Cat Hobaiter think we should do for chimp conservation?

- A) Try to understand our sister species' behavior in the wild.
- B) Make efforts to preserve each individual chimp community.
- C) Study the unique characteristics of each generation of chimps.
- D) Endeavor to restore chimp habitats to expand its total population.

55. What does the author suggest conservationists do?

- A) Focus entirely on culturally-based entities rather than genetically-based ones.
- B) Place more stress on animal traditions than on their physical conservation.
- C) Conserve animal species in a novel and all-round way.
- D) Explore the cultures of species before they vanish.

TEXT10

Humans are fascinated by the source of their failings and virtues. This preoccupation inevitably

leads to an old debate: whether nature or nurture moulds us more. A revolution in genetics has poised this as a modern political question about the character of our society: if personalities are hard-wired into our genes, what can governments do to help us? It feels morally questionable, yet claims of genetic selection by intelligence are making headlines.

This is down to "hereditarian" (遗传论的) science and a recent paper claimed "differences in exam performance between pupils attending selective and non-selective schools mirror the genetic differences between them". With such an assertion, the work was predictably greeted by a lot of absurd claims about "genetics determining academic success". What the research revealed was the rather less surprising result: the educational benefits of selective schools largely disappear once pupils' inborn ability and socio-economic background were taken into account. It is a glimpse of the blindingly obvious—and there's nothing to back strongly either a hereditary or environmental argument.

Yet the paper does say children are "unintentionally genetically selected" by the school system. Central to hereditarian science is a tall claim: that identifiable variations in genetic sequences can predict an individual's aptness to learn, reason and solve problems. This is problematic on many levels. A teacher could not seriously tell a parent their child has a low genetic tendency to study when external factors clearly exist. Unlike-minded academics say the inheritability of human traits is scientifically unsound. At best there is a weak statistical association and not a causal link between DNA and intelligence. Yet sophisticated statistics are used to create an intimidatory atmosphere of scientific certainty.

While there's an undoubted genetic basis to individual difference, it is wrong to think that socially defined groups can be genetically accounted for. The fixation on genes as destiny is surely false too. Medical predictability can rarely be based on DNA alone; the environment matters too. Something as complex as intellect is likely to be affected by many factors beyond genes. If hereditarians want to advance their cause it will require more balanced interpretation and not just acts of advocacy.

Genetic selection is a way of exerting influence over others, "the ultimate collective control of human destinies," as writer H. G. Wells put it. Knowledge becomes power and power requires a sense of responsibility. In understanding cognitive ability, we must not

elevate discrimination to a science: allowing people to climb the ladder of life only as far as their cells might suggest. This will need a more sceptical eye on the science. As technology progresses, we all have a duty to make sure that we shape a future that we would want to find ourselves in.

46.What did a recent research paper claim?

- A) The type of school students attend makes a difference to their future.
- B) Genetic differences between students are far greater than supposed.
- C) The advantages of selective schools are too obvious to ignore.
- D) Students' academic performance is determined by their genes.

47.What does the author think of the recent research?

- A) Its result was questionable.
- B) Its implication was positive.
- C) Its influence was rather negligible.
- D) Its conclusions were enlightening.

48.What does the author say about the relationship between DNA and intelligence?

- A) It is one of scientific certainty.
- B) It is not one of cause and effect.
- C) It is subject to interpretation of statistics.
- D) It is not fully examined by gene scientists.

49.What do hereditarians need to do to make their claims convincing?

- A) Take all relevant factors into account in interpreting their data
- B) Conduct their research using more sophisticated technology.
- C) Gather gene data from people of all social classes.
- D) Cooperate with social scientists in their research.

50.What does the author warn against in the passage?

- A) Exaggerating the power of technology in shaping the world.
- B) Losing sight of professional ethics in conducting research.
- C) Misunderstanding the findings of human cognition research.
- D) Promoting discrimination in the name of science.

TEXT11

Nicola Sturgeon's speech last Tuesday setting out the Scottish government's legislative programme for the year ahead confirmed what was already pretty clear. Scottish councils are set to be the first in the UK with the power to levy charges on visitors, with Edinburgh likely to lead the way.

Tourist taxes are not new. The Himalayan kingdom of Bhutan has a longstanding policy of charging visitors a daily fee. France's tax on overnight stays was introduced to assist thermal spa (温泉) towns to develop, and around half of French local authorities use it today.

But such levies are on the rise. Moves by Barcelona and Venice to deal with the phenomenon of "over-tourism" through the use of charges have recently gained prominence. Japan and Greece are among the countries to have recently introduced tourist taxes.

That the UK lags behind is due to our weak, by international standards, local government, as well as the opposition to taxes and regulation of our aggressively pro-market ruling party. Some UK cities have lobbied without success for the power to levy a charge on visitors. Such levies are no universal remedy as the amounts raised would be tiny compared with what has been taken away by central government since 2010. Still, it is to be hoped that the Scottish governments bold move will prompt others to act. There is no reason why visitors to the UK, or domestic tourists on holiday in hotspots such as Cornwall, should be exempt from taxation-particularly when vital local services including waste collection, park maintenance and arts and culture spending are under unprecedented strain.

On the contrary, compelling tourists to make a financial contribution to the places they visit beyond their personal consumption should be part of a wider cultural shift. Westerners with disposable incomes have often behaved as if they have a right to go wherever they choose with little regard for the consequences. Just as the environmental harm caused by aviation and other transport must come under far greater scrutiny, the social cost of tourism must also be confronted. This includes the impact of short-term lets on housing costs and quality of life for residents. Several European capitals, including Paris and Berlin, are leading a campaign for tougher regulation by the European Union. It also includes the impact of overcrowding, litter and the kinds of behaviour associated with noisy parties.

There is no "one-size-fits-all" solution to this problem. The existence of new revenue streams for some but not all councils is complicated, and businesses are often opposed,

fearing higher costs will make them uncompetitive. But those places that want them must be given the chance to make tourist taxes work.

51. What do we learn from Nicola Sturgeon's speech?

- A) The UK is set to adjust its policy on taxation.
- B) Tourists will have to pay a tax to visit Scotland.
- C) The UK will take new measures to boost tourism.
- D) Edinburgh contributes most to Scotland's tourism.

52. How come the UK has been slow in imposing the tourist tax?

- A) Its government wants to attract more tourists.
- B) The tax is unlikely to add much to its revenue.
- C) Its ruling party is opposed to taxes and regulation.
- D) It takes time for local governments to reach consensus.

53. Both international and domestic visitors in the UK should pay tourist tax so as to

- A) elevate its tourism to international standards
- B) improve the welfare of its maintenance workers
- C) promote its cultural exchange with other nations
- D) ease its financial burden of providing local services

54. What does the author say about Western tourists?

- A) They don't seem to care about the social cost of tourism.
- B) They don't seem to mind paying for additional services.
- C) They deem travel an important part of their life.
- D) They subject the effects of tourism to scrutiny.

55. What are UK people's opinions about the levy of tourist tax?

- A) Supportive.
- B) Divided.
- C) Skeptical.
- D) Unclear.

TEXT12

We often think of drawing as something that takes inborn talent, but this kind of thinking stems from our misclassification of drawing as, primarily, an art form rather than a tool for learning.

Researchers, teachers, and artists are starting to see how drawing can positively impact a wide variety of skills and disciplines.

Most of us have spent some time drawing before, but at some point, most of us stop drawing. There are people who don't, obviously, and thank god for that: a world without designers and artists would be a very shabby one indeed.

Some argue that so many adults have abandoned drawing because we've miscategorized it and given it a very narrow definition. In his book, *Stick Figures: Drawing as a Human Practice*, Professor D. B. Dowd argues that we have misfiled the significance of drawing because we see it as a professional skill instead of a personal capacity. We mistakenly think of "good" drawings as those which work as recreations of the real world, as realistic illusions. Rather, drawing should be recategorized as a symbolic tool.

Human beings have been drawing for 73,000 years. It's part of what it means to be human. We don't have the strength of chimpanzees (大猩猩) because we've given up animal strength to manipulate subtle instruments, like hammers, spears, and later pens and pencils. The human hand is an extremely dense network of nerve endings. In many ways, human beings are built to draw.

Some researchers argue that doodling (涂画) activates the brain's so-called default circuit—essentially, the areas of the brain responsible for maintaining a baseline level of activity in the absence of other stimuli. Because of this, some believe that doodling during a boring lecture can help students pay attention. In one study, participants were asked to listen to a list of names while either doodling or sitting still. Those who doodled remembered 29 percent more of the names than those who did not.

There's also evidence that drawing talent is based on how accurately someone perceives the world. The human visual system tends to misjudge size, shape, color, and angles but artists perceive these qualities more accurately than non-artists. Cultivating drawing talent can become an essential tool to improve people's observational skills in fields where the visual is important.

Rather than think of drawing as a talent that some creative people are gifted in, we

should consider it as a tool for seeing and understanding the world better-one that just so happens to double as an art form. Both absent-minded doodling and copying from life have been shown to positively affect your memory and visual perception, so complain loudly the next time your school board slashes the art department's budget.

46.What do people generally think about drawing?

- A) It is a gift creative people are endowed with.
- B) It is a skill that is acquired with practice.
- C) It is an art form that is appreciated by all.
- D) It is an ability everyone should cultivate.

47. What do we learn about designers and artists?

- A) They are declining gradually in number.
- B) They are keen on changing shabby surroundings.
- C) They add beauty and charm to the world.
- D) They spend most of their lives drawing.

48. What does Professor D. B. Dowd argue in his book?

- A) Everybody is born with the capacity to draw.
- B) Drawing is a skill that requires special training.
- C) The value of drawing tends to be overestimated.
- D) Drawing should be redefined as a realistic illusion.

49. What have some researchers found from one study about doodling?

- A) It is a must for maintaining a base level of brain activity.
- B) It can turn something boring into something interesting.
- C) It is the most reliable stimulant to activate the brain.
- D) It helps improve concentration and memory.

50. What is characteristic of people with drawing talent?

- A) Sensitivity to cognitive stimulation.
- B) Subtlety of representation.
- C) Accuracy in categorization.
- D) Precision in visual perception.

TEXT13

For all the fuss made about top speeds, cornering ability and acceleration, the most useful gadgets on a modern car are those which work when you're going very slowly: parking sensors, sound systems, and navigation apps which will show a way around upcoming traffic jams. This seems to be one of the few areas where the benefit of sharing personal information comes straight back to the sharer: because these apps know where almost all the users are, and how fast they are moving almost all the time, they can spot traffic congestion (堵塞) very quickly and suggest ways round it.

The problem comes when everyone is using a navigation app which tells them to avoid everyone else using the same gadget. Traffic jams often appear where no one has enough information to avoid them. When a lucky few have access to the knowledge, they will benefit greatly. But when everyone has perfect information, traffic jams simply spread onto the side roads that seem to offer a way round them.

This new congestion teaches us two things. The first is that the promises of technology will never be realised as fully as we hope; they will be limited by their unforeseen and unintended consequences. Sitting in a more comfortable car in a different traffic jam is pleasant but hardly the liberation that once seemed to be promised. The second is that self-organisation will not get us where we want to go. The efforts of millions of drivers to get ahead do not miraculously produce a situation in which everyone does better than before, but one in which almost everyone does rather worse. Central control and collective organisation can produce smoother and fairer outcomes, though even that much is never guaranteed.

Similar limits can be foreseen for the much greater advances promised by self-driving cars. Last week, one operated by the taxi company Uber struck and killed a woman pushing her bicycle across a wide road in Arizona. This was the first recorded death involving a car which was supposed to be fully autonomous. Experts have said that it suggests a "catastrophic failure" of technology.

Increasingly, even Silicon Valley has to acknowledge the costs of the intoxicating (令人陶醉的) hurry that characterises its culture. What traffic teaches us is that reckless and uncontrolled change is as likely to harm us as it is to benefit us, and that thoughtful regulation is necessary for a better future.

51. What does the author say about car advertisements?

- A) They portray drivers who enjoy speed on the road.
- B) They present a false picture of the autonomy cars provide.
- C) They pursue individuality and originality in design concept.
- D) They overestimate the potential market of autonomous cars.

52. What does the author imply about the various gadgets on cars?

- A) They can help to alleviate traffic jams.
- B) Most of them are as effective as advertised.
- C) Only some can be put to use under current traffic conditions.
- D) They are constantly upgraded to make driving easier and safer.

53. What does the author say about the use of navigation apps?

- A) It is likely to create traffic jams in other places.
- B) It helps a great deal in easing traffic congestion.
- C) It sharply reduces the incidence of traffic accidents.
- D) It benefits those who are learning to drive.

54. What does the author say about technology?

- A) Its consequences are usually difficult to assess.
- B) It seldom delivers all the benefits as promised.
- C) It depends on the required knowledge for application.
- D) Its benefits are guaranteed by collective wisdom.

55. What key message does the author try to convey in the passage?

- A) The consequences of technological innovation need not be exaggerated.
- B) There is always a price to pay to develop technology for a better world.
- C) Technological innovation should be properly regulated.
- D) The culture of Silicon Valley ought not to be emulated

TEXT14

You can't see it, smell it, or hear it, and people disagree on how precisely to define it, or where exactly it comes from. It isn't a school subject or an academic discipline, but it can be learned. It is a quality that is required of artists, but it is also present in the lives of scientists and entrepreneurs. All of us benefit from it and we thrive mentally and spiritually when we are able to wield it. It is a delicate thing, easily stamped out; in fact, it flourishes most fully when people are playful and childlike. Meanwhile, it works best in conjunction with deep knowledge and expertise.

This mysterious-but teachable-quality is creativity, the subject of a recently-published report by Durham Commission on Creativity and Education. The report concludes that creativity should not inhabit the school curriculum only as it relates to drama, music, art and other obviously creative subjects, but that creative thinking ought to run through all of school life, infusing(充满) the way humanities and natural sciences are learned.

The authors, who focus on education in England, offer a number of sensible recommendations, some of which are an attempt to alleviate the uninspiring and fact-based approach to education that has crept into policy in recent years. When children are regarded as vessels to be filled with facts, creativity does not prosper; nor does it when teachers' sole objective is coaching children towards exams. One suggestion from the commission is a network of teacher-led "creativity collaboratives", along the lines of existing maths hubs (中心), with the aim of supporting teaching for creativity through the school curriculum.

Nevertheless, it is arts subjects through which creativity can most obviously be fostered. The value placed on them by the independent education sector is clear. One only has to look at the remarkable arts facilities at Britain's top private schools to comprehend this. But in the state sector the excessive focus on English, maths and science threatens to crush arts subjects; meanwhile, reduced school budgets mean diminishing extracurricular activities. There has been a 28.1% decline in students taking creative subjects at high schools since 2014, though happily, art and design have seen a recent increase.

This discrepancy between state and private education is a matter of social justice. It is simply wrong and unfair that most children have a fraction of the access to choirs, orchestras, art studios and drama that their more privileged peers enjoy. As lives are affected by any number of looming challenges — climate crisis, automation in the workplace — humans are going to need creative thinking more than ever. For all of our sakes, creativity in education,

and for all, must become a priority.

46.What do we learn from the passage about creativity?

- A) It develops best when people are spiritually prepared.
- B) It is most often wielded by scientists and entrepreneurs.
- C) It is founded on scientific knowledge and analytical skills.
- D) It contributes to intellectual growth but can easily be killed.

47.What is the conclusion of a recently-published report?

- A) Natural sciences should be learned the way humanities courses are.
- B) Cultivation of creativity should permeate the entire school curriculum.
- C) Art courses should be made compulsory for all students.
- D) Students should learn more obviously creative subjects.

48.What does the report say is detrimental to the fostering of creativity?

- A) Alleviation of pressure.
- B) Teacher-led school activities.
- C) Test-oriented teaching.
- D) Independent learning.

49.What do we learn about the private schools in the UK?

- A) They encourage extracurricular activities.
- B) They attach great importance to arts education.
- C) They prioritize arts subjects over maths and sciences.
- D) They cater to students from different family backgrounds.

50.What should be done to meet the future

challenges?

- A) Increasing government investment in school education.
- B) Narrowing the existing gap between the rich and the poor.
- C) Providing all children with equal access to arts education.
- D) Focusing on meeting the needs of under-privileged students.

TEXT15

Emulating your conversation partner's actions is a common human behavior classified as "mirroring" and has been known and studied by psychologists for years. We all tend to subconsciously copy gestures of people we like. But why do we act like this?

As a rule, mirroring means that conversationalists enjoy their communication and that there's a certain level of agreement between them. The topic of discussion is equally interesting for both and they know their interests meet.

Repeating someone's behavior is typical of talented communicators, not always because the person is sympathetic, but because there is a goal to be achieved. This way new idols have been brought to the stage: politicians, celebrities, and other big names. Popular culture makes people want to look popular, and act and speak like popular people.

Nowadays celebrities steal lyrics from each other and struggle with copyright violation accusations or straightforwardly claim themselves to be the authors, even though all the work was done by other people.

Among celebrities, it's trendy nowadays to use their own speech writers as politicians do. The so-called "ghostwriting" can take various forms: books, articles, autobiographies, and even social media posts.

Who is a true copycat (抄袭者) and who gets copycatted? Sometimes, it is a hard nut to crack without an expert's help. But new authorship defending methods based on identifying individual writing patterns are already here. Their aim is to protect intellectual property. Using scientific methods, some of them can define authorship with 85% accuracy.

Writing is not an easy craft to master. If you want to write like a professional without plagiarism (抄袭), there are a few lessons to learn and the first one is: "Copy from one, it's plagiarism; copy from two, it's research." The correct interpretation of this statement is not about copying, but rather about creating your own style. When you study an author's writing style, don't stop on a single one, but explore numerous styles instead. Examine types of sentences they use, pay attention to their metaphors, and focus on stories you feel you could write a pretty cool sequel (续篇) to.

Imitation is rather paradoxical. As an integral part of learning, it brings about positive changes, making people develop and grow. However, it may do a lot of harm. Copying someone's thoughts, ideas or inventions is completely unacceptable. It infringes on intellectual property rights of others.

Still, many things we do are about copying others one way or another. So if you want to compliment someone on the work they have done and imitate it, just make sure you do it the right way to avoid committing plagiarism.

51.What do people tend to do while engaging in a conversation?

- A) Repeat what their partners say one way or another.
- B) Focus as much as possible on topics of mutual interest.
- C) Imitate their partners' gestures without their knowing it.
- D) Observe carefully how their partners make use of gestures.

52.When does mirroring usually take place in a conversation?

- A) When both sides are sympathetic with each other.
- B) When both sides have a lot of things in common.
- C) When both sides make interesting contributions.
- D) When both sides try to seek common ground.

53.What do we learn about popular culture?

- A) It encourages people to imitate.
- B) It appeals mostly to big names.
- C) It acquaints young people with their idols.
- D) It can change people's mode of cognition.

54. Why is the saying "copy from two, it's research" a lesson to learn?

- A) It facilitates the creation of one's own writing style.
- B) It helps to protect one's intellectual property rights.
- C) It fosters correct interpretation of professional writing.
- D) It enables one to write intriguing sequels to famous stories.

55.Why does the author say imitation is rather paradoxical?

- A) It is liable to different interpretations.
- B) It is by and large a necessary evil.
- C) It can give rise to endless disputes.
- D) It may do harm as well as good.

TEXT16

Social media is absolutely everywhere. Billions of people use social media on a daily basis to create, share, and exchange ideas, messages, and information. Both individuals and businesses post regularly to engage and interact with people from around the world. It is a powerful communication medium that simultaneously provides immediate, frequent, permanent, and wide-reaching information across the globe.

People post their lives on social media for the world to see. Facebook, Twitter, LinkedIn, and countless other social channels provide a quick and simple way to glimpse into a job candidate's personal life—both the positive and negative sides of it. Social media screening is tempting to use as part of the hiring process, but should employers make use of it when researching a potential candidate's background?

Incorporating the use of social media to screen job candidates is not an uncommon practice. A 2018 survey found that almost 70% of employers use social media to screen candidates before hiring them. But there are consequences and potential legal risks involved too. When done inappropriately,

social media screening can be considered unethical or even illegal. Social media screening is essentially scrutinising a job candidate's private life. It can reveal information about protected characteristics like age, race, nationality, disability, gender, religion, etc., and that could bias a hiring decision. Pictures or comments on a private page that are taken out of context could ruin a perfectly good candidate's chances of getting hired. This process could potentially give an unfair advantage to one candidate over another. It creates an unequal playing field and potentially provides hiring managers with information that can impact their hiring decision in a negative way.

It's hard to ignore social media as a screening tool. While there are things that you shouldn't see, there are some things that can be lawfully considered—making it a valuable source of relevant information too. Using social media screening appropriately can help ensure that you don't hire a toxic employee who will cost you money or stain your company's reputation. Consider the lawful side of this process and you may be able to hire the best employee ever. There is a delicate balance.

Screening job candidates on social media must be done professionally and responsibly. Companies should stipulate that they will never ask for passwords, be consistent, document decisions, consider the source used and be aware that other laws may apply. In light of this it is probably best to look later in the process and ask human resources for help in navigating it.

Social media is here to stay. But before using social media to screen job candidates, consulting with management and legal teams beforehand is essential in order to comply with all laws.

46. What does the author mainly discuss in the passage?

- A) The advantage of using social media in screening job candidates.
- B) The potentially invasive nature of social media in everyday life.
- C) Whether the benefits of social media outweigh the drawbacks.
- D) Whether social media should be used to screen job candidates.

47. What might happen when social media is used to screen job candidates?

- A) Moral or legal issues might arise.
- B) Company reputation might suffer.
- C) Sensational information might surface.
- D) Hiring decisions might be complicated.

48. When could online personal information be detrimental to candidates?

- A) When it is separated from context.
- B) When it is scrutinised by an employer.
- C) When it is magnified to a ruinous degree.
- D) When it is revealed to the human resources.

49. How can employers use social media information to their advantage while avoiding unnecessary risks?

- A) By tipping the delicate balance.
- B) By using it in a legitimate way.
- C) By keeping personal information on record.
- D) By separating relevant from irrelevant data.

50. What does the author suggest doing before screening job candidates on social media?

- A) Hiring professionals to navigate the whole process.
- B) Anticipating potential risks involved in the process.
- C) Seeking advice from management and legal experts.
- D) Stipulating a set of rules for asking specific questions.

From Accountant to Yogi: Making a Radical Career Change

[A] At some point, almost all of us will experience a period of radical professional change. Some of us will seek it out; for others it will feel like an unwelcome intrusion into otherwise stable careers. Either way, we have choices about how we respond to it when it comes.

[B] We recently caught up with yoga entrepreneur Leah Zaccaria, who put herself through the fire of change to completely reinvent herself. In her search to live a life of purpose, Leah left her high-paying accounting job, her husband, and her home, hi the process, she built a radically new life and career. Since then, she has founded two yoga studios, met a new life partner, and formed a new community of people. Even if your personal reinvention is less drastic, we think there are lessons from her experience that apply.

[C] Where do the seeds of change come from? the Native American Indians have a saying: “Pay attention to the whispers so you won’t have to hear the screams.” Often the best ideas for big changes come from unexpected places — it’s just a matter of tuning in. Great leaders recognize the weak signals or slight signs that point to big changes to come. Leah reflects on a time she listened to the whispers: “About the time my daughter was five years old. I started having a sense that ‘this isn’t right.’” She then realized that her life no longer matched her vision for it.

[D] Up until that point, Leah had followed traditional measures of success. After graduating with a degree in business and accounting, she joined a public accounting firm, married, bought a house, put lots of stuff in it, and had a baby. “I did what everybody else thought looked successful,” she says. Leah easily could have fallen into a trap of feeling content; instead, her energy sparked a period of experimentation and renewal.

[E] Feeling the need to change, Leah started playing with future possibilities by exploring her interests and developing new capabilities. First trying physical exercise

and dieting, she lost some weight and discovered an inner strength. “I felt powerful because I broke through my own limitations,” she recalls.

[F] However, it was another interest that led Leah to radically reinvent herself. “I remember sitting on a bench with my aunt at a yoga studio,” she said, having a moment of clarity right then and there: Yoga is saving my life. Yoga is waking me up. I’m not happy and I want to change and I’m done with this.” In that moment of clarity Leah made an important leap, conquering her inner resistance to change and making a firm commitment to take bigger steps.

[G] Creating the future you want is a lot easier if you are ready to exploit the opportunities that come your way. When Leah made the commitment to change, she primed herself to new opportunities she may otherwise have overlooked. She recalls:

[H] One day a man I worked with, Ryan, who had his office next to mine, said, “Leah, let’s go look at this space on Queen Anne.” He knew my love for yoga and had seen a space close to where he lived that he thought might be good to serve as a yoga studio. As soon as I saw the location, I knew this was it. Of course I was scared, yet I had this strong sense of “I have to do this.” Only a few months later Leah opened her first yoga studio, but success was not instant.

[I] Creating the future takes time. That’s why leaders continue to manage the present while building toward the big changes of the future. When it’s time to make the leap, they take action and immediately drop what’s no longer serving their purpose. Initially Leah stayed with her accounting job while starting up the yoga studio to make it all work.

[J] Soon after, she knew she had to make a bold move to fully commit to her new future. Within two years, Leah shed the safety of her accounting job and made the switch complete. Such drastic change is not easy.

[K] Steering through change and facing obstacles brings us face to face with our fears. Leah reflects on one incident that triggered her fears, when her investors threatened to shut her down: “I was probably up against the most fear I’ve ever had, ” she says. “I had spent two years cultivating this community, and it had become successful very fast, but within six months I was facing the prospect of losing it all.”

[L] She connected with her sense of purpose and dug deep, cultivating a tremendous sense of strength. “I was feeling so intentional and strong that I wasn’t going to let fear just take over. I was thinking, ‘OK, guys, if you want to try to shut me down, shut me down.’ And I knew it was a negotiation scheme, so I was able to say to myself, ‘This is not real.’” By naming her fears and facing them head-on, Leah gained confidence. For most of us, letting go of the safety and security of the past gives us great fear. Calling out our fears explicitly, as Leah did, can help us act decisively.

[M] The cycle of renewal never ends. Leah’s growth spurred her to open her second studio—and it wasn’t for the money.

[N] I have no desire to make millions of dollars. It’s not about that; it’s about growth for me. Honestly, I didn’t need to open a second studio. I was making as much money as I was as an accountant. But I know if you don’t grow, you stand still, and that doesn’t work for me.

[O] Consider the current moment in your own life, your team or your organization. Where are you in the cycle of renewal: Are you actively preserving the present, or selectively forgetting the past, or boldly creating the future? What advice would Leah give you to move you ahead on your journey? Once we’re on the path of growth, we can continually move through the seasons of transformation and renewal.

36. Readiness to take advantage of new opportunities will make it easier to create one's desired future.

37. By conventional standards, Leah was a typical successful woman before she changed her career.

38. Leah gained confidence by laying out her fears and confronting them directly.

39. In search of a meaningful life, Leah gave up what she had and set up her own yoga studios.

40 Leah's interest in yoga prompted her to make a firm decision to reshape her life.

41. Small signs may indicate great changes to come and therefore merit attention.

42. Leah's first yoga studio was by no means an immediate success.

43. Some people regard professional change as an unpleasant experience that disturbs their stable careers.

44. The worst fear Leah ever had was the prospect of losing her yoga business.

45. As she explored new interests and developed new potentials, Leah felt powerful internally.

第二篇

Saving Our Planet

A) In the long view, the human relationship with forests has been one of brutal destruction, but even it carries elements of slow hope. In the Middle Ages, there was no shortage of timber in most parts of the world, and few saw cutting down forests as a problem. Yet in 1548 the people of Venice estimated that an important timber supply would last only 30 years at their current rate of usage-but different forest management would make it possible to meet the demand for many centuries to come. The idea of preserving resources came out of a concern for the future: a fear of using up resources faster than they could be replenished (补充).

B)

C) Economic interests were at the core of this understanding of trees and forests. It would take more than three centuries before scientists began to understand that timber production is not the only, and possibly not the most important, function of forests. The late 19th and early 20th century saw an increasing recognition that forests serve as habitats for countless animal and plant species that all rely on each other. They take over protective functions against soil erosion and landslides (塌方); they make a significant contribution to the water balance as they prevent surface runoff; they filter dirt particles, greenhouse gases and radioactive substances from the air; they produce oxygen; they provide spaces for recreation and they preserve historic and prehistoric remains. As a result, forests around the world have been set aside as parks or wilderness areas.

C) Recent years have seen a big change in our view of forests. Peter Wohlleben's book *The Hidden Life of Trees* (2015), an international bestseller, suggests that trees can warn each other of danger through a "wood wide web" of roots and fungi (真菌). support each other through sharing of nutrients and information, and they even keep ancient stumps

alive by feeding them solutions of sugars. Such insights have made us aware of deep ecological relationships between humans and the more-than-human world.

D) Awareness of ecologies is a recent phenomenon. It was not until the 1940s that the concept of the "environment" embracing all living and nonliving things developed. In the 1970s, the term "environment" gained currency, becoming widely adopted in the English and Romance languages, and as "Umwelt" ("surrounding world") in German. The emergence of the idea led to the rise of environmental agencies, regulations and environmental studies, and to environmental science as new, integrated academic disciplines. It was in 1956 that the very first bachelor of science in environmental studies was awarded, at the State University of New York College of Forestry at Syracuse. Since the 1970s with the rise of "environmentalism"-environmental studies programmes have sprung up at hundreds of universities. There is (slow) hope in the fact that scholars from many different disciplines have adopted the term "environment" over the past decades. They are exploring intricate connections within and between complex ecologies, as well as the impact that human environment-making (through techno-industrial, economic and other manipulative developments) has had on the biosphere.

E) The rise of the idea of the environment and a scholarly understanding of ecological processes has influenced new technologies and also politics. We have come to ask questions about vulnerability and risk, world ecologies, and the relationship between nature and power. The search for an adequate response to climate change occupies centre stage in international diplomacy.

A) Social and environmental activists, scientists and indigenous groups

have called the Paris Agreement of the United Nations Climate Change Conference in December 2015 insufficient, weak, or compromised. To some extent, they are right: climate change has already destroyed tens of thousands of livelihoods, and the situation will worsen in the near future for millions of mostly poorer people, who will join the ranks of those who have already been displaced by climate change and extreme weather events. But the Paris Conference nevertheless marked a historic step toward the recognition of the need for action on climate change, the cutting of carbon emissions, and world cooperation. There were 195 nations that came to the table in Paris and agreed to limits on emissions. Historically, nothing comparable had happened prior to this. Before the 20th century, a handful of scientists had been interested in the theoretical relationship between greenhouse gases and climate change, but only the empirical evidence accumulated since the late 20th century established a clear connection between the burning of fossil fuels and a vastly accelerated rise in global temperatures.

B)

C) The current crisis is not the first that humans have encountered, and a look at the struggles with pollution in recent history reveals transformations that once seemed unimaginable. The "London fog" that came to define the capital through British novels and thrillers is in reality smog or smoke, a legacy of industrialisation. After a century of ignorance, London was hit by the Great Smog of December 1952-the worst air-pollution event in the history of the United Kingdom which caused the deaths of approximately 12,000 people. Shortly thereafter, public initiatives and political campaigns led to strict regulations and new laws, including the Clean Air Act (1956). Today, London has effectively reduced traffic emissions through the introduction of a Congestion Charge Zone in 2003, and an Ultra Low Emission Zone in 2019.

D) Scientific evidence that we are living in an era of climate change,

resource exhaustion and potential ecological disaster is overwhelming. How do we motivate a public exhausted by never-ending scenarios of doom and disaster, when the challenges seem so huge and so impossible to solve? Statistics about extinction and the gloom of decline will not in themselves get us out of our often self-created ecological traps: instead, they are more likely to result in paralysis and inaction.

E) We need stories and histories of change and transformation: ecological stories that make us confront the fact that human power is potentially destructive, and that the survival of our species on this planet depends on the preservation of soil and water, and the habitats and ecological systems.

F) It is time that we showed successes and accelerations in ecological awareness, action and restoration: stories that include past successes and future visions about the rise of urban gardening and of renaturalised riverscapes, of successful protests against polluted air and water, of the rise of regional markets and slow food, and the planting of trees around the globe, of initiatives and enterprises that work towards ecological restoration. The reality of ecological curses seems far greater than the power of the hopes left at the bottom of Pandora's box. But if we believe that nothing can be changed, then we are giving up our opportunity to ad.

K) Today's saving powers will not come from a *deus ex machina* (解围之神). In an ever-more complex and synthetic world, our saving powers won't come from a single source, and certainly not from a too-big-to-fail approach or from those who have been drawn into the whirlpool of our age of speed. Hope can work as a wake up call. It acknowledges setbacks. The concept of slow hope suggests that we can't expect things to change overnight. If the ever-faster exhaustion of natural resources (in ecological terms) and the "shrinking of the present" (in social terms) are urgent problems of humans, then cutting down on exhaustive practices and

working towards a "stretching of the present" will be ways to move forward.

36.Climate change has wrought havoc on the lives of tens of thousands of people.

37.It took scientists a long time to realise that the function of forests goes far beyond providing humans with timber.

38.There is abundant evidence that we are now facing a possible ecological disaster.

39.Environmental science became academic disciplines only some sixty years ago.

40.Things cannot change overnight, but reducing the consumption of natural resources will help solve the ecological crisis.

41.Human perception of forests has undergone a tremendous change in the past years

42.Recent history shows reduction of pollution, once seemingly impossible, can actually be accomplished.

43.People began to consider preserving natural resources when they feared they would have nothing to use in the future

44.If we doubt our ability to reverse ecological deterioration, we are throwing away the chance to take action.

45. How to respond effectively to climate change has become the focus of international diplomacy.

The Doctor Will Skype You Now

A)Fazila is a young woman that has been dealing with eczema (湿疹), a common skin condition, for the past five years, but never got it treated. The nearest hospital is an hour away, by boat and bus, and her skin condition didn't seem serious enough to make the trek, so she ignored it—until a new technology brought the doctor to her. Fazila lives on one of the remote river islands in northern Bangladesh. These islands are low-lying temporary sand islands that are continuously formed and destroyed through sand buildup and erosion. They are home to over six million people, who face repeated displacement from flooding and erosion—which may be getting worse because of climate change-and a range of health risks, including poor nutrition, malaria (疟疾) and other water-borne diseases.

B)The most dangerous thing for these remote island dwellers is land erosion. The second is lack of access to medical supplies and doctors. There are no doctors within miles, and while child mortality and maternal death have gone down in the rest of the country, this is not the case for the islands. The medical situation is so bad that it really takes away from the quality of their life. Yet for many island inhabitants-some of Bangladesh's poorest-paying for health care is a costly ordeal. Victims of erosion lose their houses, agricultural land and jobs as farmers, fishermen and day laborers. Though government hospitals are free, many people hesitate to go, citing long commutes, endless lines and questionable diagnoses. For convenience's sake, one-third of rural households visit unqualified village doctors, who rely on unscientific methods of treatment, according to a 2016 study in the peer-reviewed journal Global Health Action.

C) On the islands, there's even a colloquial (口头的) expression for the idea of making medical care your lowest priority: It's known as "rog

pushai rakha" in Bengali, which roughly translates to "stockpiling their diseases"—waiting to seek medical attention until a condition becomes extremely serious. Now, a new virtual medical service called Teledaktar (TD) is trying to make health care more easily accessible. Every week, TD's medical operators travel to the islands by boat, carrying a laptop, a portable printer for prescriptions and tools to run basic medical screenings such as blood pressure, blood sugar, body temperature and weight. They choose an area of the island with the best Internet reception and set up a makeshift (临时凑合的) medical center which consists of plastic stools and small tables borrowed from the locals' homes, a tent in case of rain and a sheet that is strung up to give the patients privacy during their session.

D) Launched in October 2018, TD has eight centers in towns and villages across rural Bangladesh and on three islands. It is funded by a nonprofit organization founded by Bangladeshi entrepreneurs, finance and technology professionals. Inside the center, the laptop screen lights up to reveal Dr. Tina Mustahid, TD's head physician, live-streamed (网络直播) from the capital city of Dhaka for free remote medical consultations. Affectionately called Doctor Apa—"older sister" in Bengali—by her patients, she is one of three volunteer doctors at TD.

E) "I diagnose them through conversation," says Dr. Mustahid. "Sometimes it's really obvious things that local doctors don't have the patience to talk through with their patients. For example, a common complaint mothers come in with is that their children refuse to eat their meals. The mothers are concerned they are dealing with indigestion, but it's because they are feeding the children packaged chips which are cheap and convenient. I tell them it is ruining their appetite and ask them to cut back on unhealthy snacks." Dr. Mustahid says building awareness about health and nutrition is important for island patients who are cut off from

mainland resources.

F) Even off the islands, Bangladesh faces a critical deficit of health services. The country has half the doctors-per-person ratio recommended by the World Health Organization: roughly one doctor per 2,000 people, instead of one doctor per 1,000 people. And of those physicians, many are concentrated in cities: 70% of the country's population live in rural areas, yet less than 20% of health workers practice there. Over 70% of TD's 3,000 patients are female, in part because many are not comfortable speaking with local doctors who tend to be male. The rural women are mostly not literate or confident enough to travel on their own to the nearest town to visit medical facilities. Many have spent their entire lives rebuilding their homes when the islands flood. Early marriage and young motherhood, which are prevalent in these parts of Bangladesh, also contribute to the early onset of health problems.

G) For most TD patients on the islands, Dr. Mustahid is the first big-city doctor that they've ever consulted. TD doctors are not meant to treat serious illnesses or conditions that require a doctor to be physically present, such as pregnancy. But they can write prescriptions, diagnose common ailments—including digestive issues, joint pain, skin diseases, fever and the common cold—and refer patients to doctors at local hospitals. The visit is also an opportunity for the patients, especially women, to air their concerns about aging, motherhood and reproductive health according to Dr. Mustahid. The doctors also offer health, dietary and lifestyle advice where necessary, including insight on everything from recognizing postnatal (产后的) depression to daily exercise. Dr. Mustahid regularly recommends her patients to take a daily thirty-minute morning walk before the sun gets too intense.

H) After a few sessions about general health issues Fazila finally opened

up about something else that was bothering her: her persistent skin condition. It can get expensive to travel to the doctor, so usually the women living on the islands describe their illness to their husbands. The husbands then go to the pharmacy, try to describe the issue and return home with some random medicines. Nothing worked for Fazila until she started seeing Dr. Apa.

I) Other nonprofits are also starting to provide health services on the islands. A local non-governmental organization called Friendship operates floating boat hospitals that provide health services to islands all over Bangladesh, docking at each for two months at a time. Friendship also runs satellite clinics in which one doctor and one clinic aide who are residents of the community disperse health and hygiene information.

J) TD still has a few major challenges. Many residents complain the medicines they are prescribed are sometimes unaffordable, but the government isn't doing enough for them. Patients often ask why the medicine isn't free along with the consultation from the doctors. The organizations are linked to local pharmacies and offer discounts to the patients and make sure to prescribe the most cost-effective brands, but still many residents can't afford even that.

K) Nevertheless, TD's remote consultations seem to be popular: Of 3,000 patients, at least 200 have returned for follow-ups, according to TD. The reason, explains one resident, might be the simple gesture of treating the island inhabitants with respect. "Dr. Apa is patient," he says, "At government hospitals, the doctors treat us very badly, but here they listen to us, I can repeat myself many times and no one gets annoyed."

36. Some children on the remote islands won't eat their meals because they are fed cheap junk food.

37. Unlike other parts of Bangladesh, the number of women who die from giving birth remains high on the river islands.

38. One big problem many islanders have is that they can't afford the prescribed medicines, even with discounts offered.

39. TD is a virtual medical service financially supported by one of the nation's nonprofit organizations.

40. TD doctors are welcome to the islanders because they treat the sick with respect and patience.

41. Women islanders tend to have health problems early partly because they get married and give birth early.

42. TD doctors make weekly visits to the remote islands to provide services at a temporary medical center.

43. TD doctors provide the islanders with online diagnoses and treatments for common diseases.

44. The residents of the river islands have to keep moving their homes because of floods and land erosions.

45. Women islanders usually rely on their husbands to get some medicines for them without diagnoses and prescriptions.

It is important that scientists be seen as normal people asking and answering important questions. Good, sound science depends on 26, experiments and reasoned methodologies. It requires a willingness to ask new questions and try new approaches. It requires one to take risks and experience failures. But good science also requires 27 understanding, clear explanation and concise presentation.

Our country needs more scientists who are willing to step out in the public 28 and offer their opinions on important matters. We need more scientists who can explain what they are doing in language that is 29 and understandable to the public. Those of us who are not scientists should also be prepared to support public engagement by scientists, and to 30 scientific knowledge into our public communications.

Too many people in this country, including some among our elected leadership, still do not understand how science works or why robust, long-range investments in research vitally matter. In the 1960s, the United States 31 nearly 17% of discretionary (可酌情支配的) spending to research and development, 32 decades of economic growth. By 2008, the figure had fallen into the single 33. This occurs at a time when other nations have made significant gains in their own research capabilities.

At the University of California (UC), we 34 ourselves not only on the quality of our research, but also on its contribution to improving our world. To 35 the development of science from the lab bench to the market place, UC is investing our own money in our own good ideas.

Let's say you love roller-skating. Just the thought of 26 on your roller-skates brings a smile to your face. You also know that roller-skating is excellent exercise. You have a 27 attitude toward it.

This description of roller-skating 28 the three components of an attitude: affect, cognition, and behavior. You love the activity; it's great fun. These feelings 29 the affective or emotional component; they are an important ingredient in attitudes. The knowledge we have about the object constitutes the cognitive component of an attitude. You understand the health 30 that the activity can bring. Finally, attitudes have a behavioral component. Our attitudes 31 us to go outside to enjoy roller-skating.

Now, we don't want to leave you with the 32 that these three components always work together 33. They don't; sometimes they clash. For example, let's say you love pizza (affective component); however, you have high cholesterol and understand (knowledge component) that eating pizza may be bad for your health. Which behavior will your attitude result in, eating pizza or 34 it? The answer depends on which component happens to be stronger. If you are walking past a pizza restaurant at lunchtime, your emotions and feelings probably will be stronger than your knowledge that pizza may not be the best food for your health. In that instance, you have pizza for lunch. If you are at home trying to decide where to go for dinner, however, the knowledge component may 35, and you decide to go where you can eat a healthier meal.
